Generated snapshot of a real public posting. This is not an employer-issued PDF. The description below preserves the captured source text; availability may change.

Description: Develop internal trading tools, automation pipelines, data transformation systems, and research/analysis frameworks used by traders and infrastructure teams.

Skills Required:

- Strong Python 3.x fundamentals (asyncio, multiprocessing, threading)
- Experience with data libraries: pandas, NumPy, PyArrow
- Ability to build high-throughput data pipelines and ETL processes
- Familiar with REST/WebSocket APIs, exchange integrations
- Knowledge of Redis, PostgreSQL, MongoDB, or other data stores
- Experience writing production-grade, testable, modular Python applications
- Understanding of CI/CD, packaging, virtualenv/poetry/pipenv
- Exposure to charting/analytics libraries is a plus (matplotlib, plotly)
- Experience integrating with C++ or performance optimization (Cython, Numba) is a bonus
