Python Specialist - Data Processing & Analysis

Experience: 3-6 years

Job Summary: We are looking for a skilled **Python** developer with hands-on experience in data manipulation and analysis using **Pandas**. The ideal candidate should have strong problem-solving skills and experience working with large datasets in real-world applications.

Key Responsibilities:

- Write efficient, scalable **Python** code for data processing and transformation.
- Perform complex data manipulation using **Pandas**, NumPy, and other scientific libraries.
- Clean, transform, and analyze large volumes of structured and unstructured data.
- Develop scripts and tools to automate workflows.
- Collaborate with data engineers and analysts to optimize data pipelines.
- Participate in code reviews and follow best practices in version control (Git).

Required Skills:

- Strong proficiency in **Python**, especially with **Pandas** and NumPy.
- Experience working with data files in formats like CSV, Excel, JSON, and SQL.
- Familiarity with Jupyter Notebooks, API integrations, and data visualization tools (e.g., Matplotlib, Seaborn).
- Experience with SQL queries and relational databases.
- Good understanding of software development lifecycle and version control (Git).

Good to Have:

- Exposure to machine learning libraries (e.g., scikit-learn).
- Experience with cloud platforms (AWS/Azure/GCP) or data lake frameworks.
- Familiarity with Airflow, Spark, or other data orchestration tools.

Source note: The employer page title is Consultant - Python; its description names Python Developer - Pandas Specialist.
