Posting ID: python-developer

Captured (UTC): 2026-11-07T09:38:55.435076+00:00

Generated snapshot of a real public posting. This is not an employer-issued PDF. The description below preserves the captured source text; availability may change.

Location: Gurgaon/Kochi/Pollachi/Noida

4 to 10 years Full-Time

Key Responsibilities

- Collect, preprocess, and analyze large datasets using Python, NumPy, Pandas.
- Develop interactive dashboards and visualizations using Matplotlib, Seaborn, and BI tools (e.g., Tableau, Power BI).
- Write efficient, optimized SQL queries for data extraction, transformation, and reporting.
- Build and maintain data pipelines on AWS or GCP, integrating cloud storage, databases, and analytics services.
- Create and maintain RESTful data services using FastAPI or Django, enabling access to analytics and insights.
- Develop ETL/ELT workflows using tools such as Airflow, Prefect, or dbt.
- Perform exploratory data analysis (EDA), statistical modeling, and hypothesis testing.
- Collaborate with product, engineering, and business teams to define metrics and provide analytical insights.
- Ensure data integrity, documentation, and adherence to data governance standards.
- Work with version control, CI/CD, and containerization for reproducible analysis and deployment.

Required Skills & Qualifications

Core Technical Skills

- Proficiency in Python and key analytics libraries: NumPy, Pandas, Matplotlib, Seaborn.
- Strong SQL skills (joins, aggregation, window functions, query optimization).
- Experience building APIs or internal tools using FastAPI or Django.
- Solid understanding of cloud platforms (AWS, GCP) and services such as:
  - AWS: S3, Redshift, Lambda, Glue
  - GCP: BigQuery, Cloud Storage, Dataflow, Cloud Functions
- Experience with ETL/ELT and workflow orchestration tools (Airflow, Prefect, or dbt).
- Knowledge of data modeling, data warehousing, and pipeline development.
- Understanding of API design, microservices concepts, and application integration.
- Strong data visualization and storytelling skills.

Additional Tools & Tech (Recommended)

- Git & GitHub/GitLab for version control.
- Docker for containerized development environments.
- Jupyter Notebooks and VS Code for data exploration.
- Familiarity with distributed data tools (Spark, Databricks) is a plus.
- Experience with BI platforms such as Tableau, Power BI, Looker.

Preferred Qualifications

- Bachelor’s or Master’s in Data Science, Computer Science, Statistics, Engineering, or related field.
- Experience working with real-time data (Kafka, Pub/Sub).
- Knowledge of machine learning basics (scikit-learn, feature engineering, model evaluation).
- Experience integrating APIs with frontend dashboards or internal tools.
- Ability to explain technical concepts to non-technical stakeholders clearly.
