Posting ID: TRPD-26-06407

Position summary

Location: India

Workplace: On-site

Employment: Full Time

Experience: Minimum 4 years and Maximum 9 years

Role overview

Why This Role Matters.

This is a permanent Python Developer role building predictive, forecasting, anomaly-detection, root-cause-analysis, and GenAI solutions for plant and business teams. The core scope calls for Python, machine-learning and RAG application development, data pipelines, deployment through APIs with MLOps practices, and integration with SAP and industrial data sources. Tools such as PyTorch, computer-vision libraries, vector databases, LLM evaluation frameworks, and cloud platforms are listed as part of the broader toolkit, but the description does not establish that every listed tool is mandatory. The structured input gives an experience range of 4-9 years; the role is based in Korba, Chhattisgarh, with shared bachelor accommodation and a Monday-to-Saturday schedule, while the work mode is not specified. The structured location says Chhattisgarh and the description narrows it to Korba; no other material discrepancy is stated.

Your Impact

Deliver Enterprise Value

Help organisations solve complex business problems through modern technology, consulting expertise and measurable outcomes.

Collaboration

Work Across Teams

Collaborate with consultants, architects, engineers and client stakeholders throughout the project lifecycle.

Growth

Learn Continuously

Gain exposure to enterprise technologies, certifications, mentoring and real-world project experience.

Career Path

Grow With Ubique

Build a long-term consulting career with opportunities to take on greater responsibility and leadership over time.

Responsibilities

What You'll Be Doing.

Every role at Ubique contributes directly to solving meaningful business challenges for our clients.

1. Build predictive, forecasting, anomaly detection and RCA models
2. Develop RAG chatbots, AI agents and Document AI solutions
3. Build data pipelines from SAP, OSI PI, SQL Server and IoT sources
4. Deploy models as APIs and apps with MLOps practices
5. Work with plant and business teams on high-impact use cases
6. Connect through RFC/BAPI (PyRFC), OData, IDoc and SAP HANA (hdbcli)
7. Automate Auto GRN, goods movement and production/consumption booking
8. Work with SAP BTP, CPI and maker-checker governance

Technology stack

Tools & Technologies.

The platforms and technologies you'll use to build modern, enterprise-grade solutions.

1. Python Required
2. NumPy Required
3. Pandas Required
4. SciPy Required
5. scikit-learn Required
6. XGBoost Required
7. LightGBM Required
8. Statsmodels Required
9. Prophet Required
10. PyTorch Required
11. TensorFlow Required
12. Keras Required
13. ONNX Required
14. RAG Required
15. LLM Required
16. LangChain Required
17. LangGraph Required
18. LlamaIndex Required

19 Azure OpenAI Required

20 FAISS Required

Requirements

Skills & Experience.

We value curiosity, collaboration and continuous learning. If you don't meet every requirement but believe you can make an impact, we'd still love to hear from you.

Essential

Required Qualifications

- Python development and data processing
- Machine learning for predictive, forecasting, anomaly-detection, or root-cause-analysis use cases
- GenAI application development, including RAG chatbots or AI agents
- Data pipeline development and integration across business, database, or industrial data sources
- SAP integration using relevant interfaces such as RFC/BAPI, OData, IDoc, or SAP HANA
- Deployment of models or applications as APIs
- MLOps practices for operationalizing models

Preferred

Nice to Have

- NumPy, Pandas, SciPy, SQLAlchemy, and pyodbc
- Scikit-learn, XGBoost, LightGBM, Statsmodels, Prophet, SHAP, and Optuna
- PyTorch, TensorFlow, Keras, and ONNX
- OpenCV, YOLO, PaddleOCR, and Tesseract
- Transformers, LangChain, LangGraph, LlamaIndex, Azure OpenAI, Ollama, vLLM, and Docling
- FAISS, ChromaDB, Qdrant, and Azure AI Search
- RAGAS, DeepEval, and Guardrails AI
- FastAPI, Flask, Django, OAuth/JWT, and Azure API Management
- Streamlit, Gradio, React.js, Plotly, and Power BI
- OSI PI Web API, OPC UA, MQTT, and Kafka
- SQL Server, PostgreSQL, SAP HANA, and MongoDB
- MLflow, Docker, Kubernetes, Azure ML, IIS, Git, and CI/CD
- SAP BTP, CPI, and maker-checker governance

Source note: The posting's Workplace field says On-site, while its narrative says the work mode is not specified. Confirm the arrangement with the employer.

Source note: The technology cards label the listed tools Required, while the narrative says that not every tool in the broader toolkit is mandatory. Confirm the essential tools with the employer.
