Engineering · Full-time · Senior

Location: Remote / Berlin, Germany

Salary: €65,000 - €85,000

Posted: 06.07.2025

About the Role

At CheckPayee, we’re building the infrastructure of trust for European payments. Our real-time API verifies payees before payments are processed - protecting users and reducing APP fraud. As a Senior Python Developer, you’ll work on fraud detection logic, secure APIs, and large-scale transaction analytics that power our core platform.

What You’ll Do

- **Design and build REST APIs**: For fraud detection and payment verification
- **Process and analyze data**: Financial transaction data to detect anomalies and patterns
- **Optimize performance**: Profile backend performance for real-time decision-making
- **Collaborate cross-functionally**: Work with product, engineering, and compliance teams on architecture and roadmap
- **Own feature development**: Develop fraud-related features from idea to production

Technical Stack

- **Languages**: Python 3.11+, SQL
- **Frameworks**: Django, DRF, FastAPI (optional)
- **Data & ML**: pandas, NumPy, scikit-learn
- **Databases**: PostgreSQL, Redis, ClickHouse
- **Infrastructure**: Docker, GitLab CI/CD, AWS
- **Monitoring**: Grafana, Sentry, Prometheus

Requirements

Must Have

- 5+ years of Python backend development experience
- Deep knowledge of Django and REST API architecture
- Strong experience with relational databases and caching (PostgreSQL, Redis)
- Familiarity with fraud detection systems or financial risk analytics
- Solid understanding of system design and secure coding principles
- English proficiency for reading documentation and team communication

Nice to Have

- Experience with FastAPI or async Python
- Familiarity with Docker, CI/CD pipelines, and AWS
- Background in fintech or regulated industries
- Experience with real-time data pipelines or fraud modeling
- Knowledge of SEPA and European payment infrastructure

About the Team

- We speak English, Ukrainian, and Russian
- We’re fast, transparent, and support each other
- We value smart architecture and clean code
- You’ll be part of a fraud-fighting, impact-driven backend team

About CheckPayee

CheckPayee is a European Verification of Payee (VoP) provider helping banks, PSPs, and fintechs prevent fraud and comply with SEPA regulations. We’re part of a German IT group with 10+ years of experience in fintech and medtech. We build systems that are secure, scalable, and fast - and we believe in engineering with purpose.

Application Process

1. **Intro Call**: Initial discussion about your experience and our needs
2. **Tech Interview**: Architecture and fraud detection logic discussion
3. **Coding Task**: Practical assessment of your Python skills
4. **Team Call**: Meet with the engineering team
5. **Offer**: Complete process within 10-14 days

Ready to fight fraud with smart code?

Apply now or reach out to our team at careers@verification-of-payee.com with any questions.

Key Requirements

- 5+ years of backend development experience with Python
- Proficiency with Django and Django REST Framework
- Experience with PostgreSQL and Redis

- Understanding of OOP, system architecture, and core design patterns
- Experience developing and maintaining REST APIs
- Background in fraud detection, transaction analytics, or risk scoring
- Confident reading of English technical documentation

Benefits & Perks

- Remote-first culture with flexible hours
- Opportunity to fight financial fraud at scale
- Work with experienced, international team
- Modern stack: Python 3.11+, Django, ClickHouse, Docker
- Professional development budget and conference support
- Open, collaborative engineering culture
